

RBI

Resonance-Based Intelligence + Coherence-Based Governance

- RBI (engine) + CBG (vehicle) = Infrastructure Layer for Next-Generation AI
- 90-99% Cost Reduction in AI Quality Verification
- Sub-100ms Verification | Mathematical Proofs | Patent-Pending

The Problem

- AI platforms spend **\$1M-\$100M/month** on quality verification
- Current cost: **\$0.001-\$0.10 per verification**
- Performance: **1-5 seconds** per check
- **No mathematical proofs** for compliance
- Similar pain in **Financial Services, Cybersecurity, Quantum Computing**

RBI: Mathematical Verification

- **Cost:** \$0.00001 vs. \$0.001-\$0.10 (90-99% reduction)
- **Speed:** Sub-100ms vs. 1-5 seconds (10-50x faster)
- **Reliability:** Deterministic vs. probabilistic
- **Compliance:** Mathematical proofs + decision trails
- **Architecture:** Patent-pending, production-ready, universal

How RBI Works

1. **Input Processing** — standardizes data (text, vectors, telemetry)
2. **Coherence Calculation** — deterministic relationship tensors
3. **Temporal Stability** — drift detection & continuity tracking
4. **Proof-of-Meaning** — mathematical validation layer
5. **Integration Layer** — REST API / SDK

Intelligence = Coherence (Coherence-Governed Intelligence)

Market Opportunity

Sector	2024 Market	Target Revenue
AI Platforms	\$50B+	\$1.2M-\$12M+ / platform
Financial Services	\$300B+	\$500K-\$5M+ / institution
Cybersecurity	\$200B+	\$100K-\$1M+ / enterprise
Quantum Computing	\$1.3B+	\$500K-\$5M+ / enterprise

First 4 Customers = \$2M-\$23M+ potential (Year 1)

Target Customers

Tier 1 (3-6 months to revenue)

- OpenAI / Anthropic — API quality assurance
- QuantFi / finQbit — Quantum finance compliance
- ReliaQuest / CrowdStrike — Threat detection enhancement

Tier 2 (6-12 months)

- SandboxAQ — Quantum AI verification infrastructure

All targets have integration examples + technical assessments.

Business Model

1. **Per-Verification API** — \$0.00001 per call (\$1.2M-\$12M+ per platform annually)
2. **Enterprise Licensing** — \$100K-\$5M+ / year (unlimited verifications + support)
3. **Strategic Partnerships** — Revenue share (1-5%), joint go-to-market

90%+ gross margins | No proportional cost increase

The Paradigm Shift

Traditional AI (ML)	RBI (Coherence-Governed)
Generates new data	Verifies existing data
Probabilistic (confidence)	Deterministic (proofs)
Black-box explanations	Decision trails
\$0.001-\$0.10 per check	\$0.00001 per check

Category: Coherence-Governed Intelligence

Innovation: Intelligence = Coherence

Competitive Advantage & Defensibility

- **Mathematical Foundation** — Coherence equations, non-obvious, patent-pending
- **Execution Speed** — Production-ready now, 12-24 month head start
- **Network Effects** — More integrations = more value
- **Category Ownership** — We define Coherence-Governed Intelligence

Moat = Math + Patent + Speed + Network Effects

Sector Applications

- **AI Platforms** — Quality assurance, safety guardrails, cost optimization
- **Financial Services** — Regulatory proofs, risk boundary enforcement, quantum validation
- **Cybersecurity** — Coherence-based threat detection, explainable SOC operations
- **Quantum Computing** — Deterministic verification of probabilistic outputs, device stability

RBI vs. Coherence-Based Governance

- **Resonance-Based Intelligence (RBI)** — engine providing coherence scores, Proof-of-Meaning, stability signals
- **Coherence-Based Governance (CBG)** — governance layer we co-build, using RBI signals for policies, workflows, compliance

We're inviting partners to build CBG on top of RBI for each sector.

Financial Projections

Timeline	Customers	Revenue Run Rate
3-6 months	1-2	\$100K-\$1M+
6-12 months	2-4	\$500K-\$5M+
12-24 months	10-20	\$5M-\$50M+
24-36 months	20-50	\$20M-\$200M+

Year 1 target: \$2M-\$23M+ with first 4 customers

Unit Economics

- **Per-Verification:** Cost \$0.000001 → Price \$0.00001 → 90% margin
- **Enterprise Licensing:** Cost \$50K-\$200K → Price \$100K-\$5M+ → 50-90% margin
- **Scalability:** No proportional cost increase; API-first delivery

Traction

- Production-ready RBI Architecture Service (REST API + SDK)
- Integration examples: OpenAI, QuantFi, ReliaQuest, SandboxAQ
- Technical assessments + implementation guides completed
- Go-to-market materials: pitch deck, venture framework, sector docs

Ready to deploy pilots today

Risks & Mitigation

- **Big Tech Copycats:** They'll use ML (expensive). We use coherence. Different game.
- **Customer Adoption:** 90-99% cost savings + pilots to prove ROI.
- **Math Scalability:** Already production-tested.
- **Startup Competition:** 12-24 month head start + patent protection.
- **Market Timing:** AI, finance, cyber, quantum all scaling NOW.

Strategy: Move fast, get customers, own the category.

What We Need (How You Can Help)

1. **Customer Validation** — Pilot intros, enterprise sales expertise
2. **Real Metrics** — Integration support, data instrumentation
3. **Go-to-Market Execution** — Sales playbook, partnerships
4. **Team/Credibility** — Advisors, technical leaders
5. **Competitive Intelligence** — Market research, positioning

With the right team, we can execute without major investment.

The Ask

- **Technical Partners** — API integration, infra scaling, customer success
- **Business Partners** — Enterprise sales, partnerships, customer relationships
- **Advisors** — Industry connections, regulatory expertise, quantum insight
- **Investment?** Only if we want to scale faster; low infra costs + fast path to revenue.

Real need: The team to execute the category creation.

The Vision

- **0-6 months:** Pilots, first revenue, category definition
- **6-12 months:** 2-4 customers live, \$500K-\$5M+ run rate
- **12-24 months:** 10-20 customers, \$5M-\$50M+ run rate
- **Beyond:** Infrastructure layer for next-gen AI & quantum systems

Why Now

- AI platforms scaling rapidly (need cost-effective QA)
- Financial services digitizing (need compliance proofs)
- Cybersecurity threats increasing (need explainable detection)
- Quantum computing emerging (needs deterministic verification)
- We have production-ready code, patent protection, and clear GTM

The Opportunity

We have: Patent-pending tech, production code, target customers, GTM plan

We need: Partners to execute pilots, customer validation, go-to-market

Timeline: 3-6 months → first revenue; 6-12 months → \$500K-\$5M+ run rate; 12-24 months → \$5M-\$50M+

Join us in building Coherence-Governed Intelligence.

Let's Build This Together

RBI — Resonance-Based Intelligence

Contact: gigi@gigistardust.com | +1 (415) 999-9109

Coherence-Governed Intelligence | 90-99% Cost Reduction | Sub-100ms Verification

Appendix: Cost Comparison

Approach	Cost per Verification	Monthly Cost (1B ops)
ML-Based	\$0.001-\$0.10	\$1M-\$100M
RBI	\$0.00001	\$10K-\$100K
Savings	90-99%	\$990K-\$99.9M

Appendix: Market Sizes

- **AI Platforms:** \$50B+ (2024) → \$200B+ (2030)
- **Financial Technology:** \$300B+ → \$600B+
- **Cybersecurity:** \$200B+ → \$500B+
- **Quantum Computing:** \$1.3B+ → \$65B+

Total Addressable Market: \$550B+ today, \$1.3T+ by 2030.
